## **Understanding Anticipatory Grief for Healthcare Professionals**

**Presented by: Stacy Balkanski**

Anticipatory grief is a term that refers to feelings of grief prior to an actual loss. Often we refer to these as the “small losses” that occur as someone’s health declines and they lose certain cognitive or physical abilities such as driving, feeding themselves, physical mobility and memory loss to name a few.

In this workshop, we will focus on grief and loss as it relates to chronic and terminal illnesses, along with grief around divorce, job loss, surgeries and other major life changes.

**TUESDAY, OCTOBER 26, 2021**  
**12:00 PM – 2:00 PM**

This training will be presented via Zoom. Register Now!
